

Digitize Everything

About the client

A global leader in Returnable Transport Packaging management software based out of Europe, with solutions covering the entire supply chain. An independent software vendor serving logistics service providers, equipment pooling providers, manufacturers and owners of Returnable Transport Packaging in their digital transformation.

Problem Statement

The client has a contract with several RTP manufacturers and manages their inventory across several warehouses around the globe.

The stock had to be manually inspected and counted daily which required huge manpower and resulted in count misappropriation.

Problem Statement

These RTP's are sent to respective loading stations every day and all of this was monitored and recorded physically by one-to-many people for their usability

The RTP's were then returned to the respective warehouses and the entire process to assess their condition (extent of damage) and the returned numbers had to be completed manually which is cumbersome and involved a huge margin of error and we observed there was lack of accountability for the damaged and missing pallets thus incurring revenue loss

Our Approach

ANALYZE SITES
PHYSICALLY

ROBUST AI
POWERED APP

AUTO-SCANNING OF
RTP AND RECORDS

INTEGRATION WITH
OTHER SYSTEMS

Solution Details

We analyzed the work involved at every stage by one and all involved, by physically plugging our tech team at every site to build a smart and robust Mobile application which was very easy to use.

The Scanroid App captures images of the RTP's and records the inward/outward movement and the condition of every pallet, centrally recording the same real-time into the existing ERP system of the clientele.

The application also integrates with several other point solutions like the delivery note application, which needs the information to generate necessary transportation documents.

Based on the usability of Scanroid we have recorded a data accuracy of RTP's (91%)and increased the efficacy by 82% and reduced RTP's losses by 51% due to seepage of data or returnee count mismatch.

91%

DATA ACCURACY OF RTPS

SCANROID

ENTERPRISE DIGITIZATION SOLUTION

Scanroid

Simplifying digitisation of everything

PARSING DATA IN A HEARTBEAT.

Introducing **ScanRoid**, an AI powered data extractor and a complete data mapping solution.

Easy to Use

- 1 Scan a Document
- 2 Let **AI** Do the work
- 3 Export Populated Data
